Bulb specification

Not all bulbs are renewable. The following bulbs can be renewed:

Variant	Bulb desciption	Specification
Halogen headlamps	Low beam/High Beam	HIR2
	Daytime running lamp	W21/5W
Halogen headlamps	Front direction indicator	PWY24W
Xenon headlamps	Front direction indicator	PWY24W
All vehicles (outboard removable rear lamp)	Rear direction indicator	HY21W
	Reversing lamp	W16W

All other lamps are either Light Emitting Diode (LED) or Xenon units, and should only be renewed or serviced by qualified personnel.

Replacement or maintenance of Xenon lamps should only be carried out by suitably qualified personnel.

XENON LAMPS

High voltage is required to ignite the gas and metal vapour which are used to power Xenon lamps. Contact with this voltage can cause serious injury. Replacement or maintenance of Xenon lamps should only be carried out by suitably qualified personnel.

Xenon lamp units operate at a very high temperature. Make sure the lamp units have cooled before attempting to touch them.

Xenon lamp units contain mercury which is highly toxic and can be extremely harmful.

Seek advice about the correct disposal of Xenon lamp units from a Retailer/Authorised Repairer, or your local authority.
