A seat position can only be memorised during the 5 second period.

Any existing settings for a memory preset will be over-written when programming a memory position.

RECALLING A MEMORISED POSITION

Press and hold the appropriate memory button (1, 2 or 3). The button has to be pressed until the recall is complete (**MEMORY 1 (2 or 3) SETTINGS RECALLED** will be displayed in the message centre).

SITTING IN THE CORRECT POSITION

The driver and front passenger must not ride with the seat fully reclined.

Do not adjust the seat while the vehicle is moving.

The seat, head restraint, seat belt and airbags, all contribute to the protection of the user. Correct use of these components will give you greater protection, therefore you should observe the following points:

1. Sit in an upright position with the base of your spine as far back as possible and the seat back reclined no more than 30 degrees.
2. Do not move the driver's seat too close to the steering wheel. Ideally, a minimum distance of 254 mm (10 inches) is recommended between the breastbone and the steering wheel airbag cover. Hold the steering wheel in the correct position with your arms slightly bent.

- Adjust the head restraint so that the top of the head restraint is above the centre line of the head.
- Position the seat belt so that it is mid-way between your neck and your shoulder. Fit the strap tightly across your hips, not across your stomach.
- Ensure that your driving position is comfortable and enables you to maintain full control of the vehicle.
