The driver is informed of a traffic event as follows:

- A TMC Event icon shown on the map at the location of the event. See **123, RDS-TMC ICONS**.
- Text can be displayed showing the details of each occurrence. Select by touching the TMC Event icon or by selecting **Show TMC Information** from the **RDS-TMC** menu.
- Voice guidance will describe the event on the route. This information will be repeated when the repeat last voice guidance button is selected.
- Dynamic route guidance, which calculates an alternative route when the system receives the traffic event warning.
- Traffic event list shows all events sorted by road name/distance on your selected route in a straight line or along your actual route.

The information regarding the hold-up is maintained and updated even if the vehicle crosses into another country.

USING TMC

Dynamic route guidance will calculate an alternative route to avoid a traffic event, when the system receives an event warning.

The system calculates a new route for all sections. However, if any way points are set, the system calculates for the next way point.

If the event on route is serious (closed road) or if the new route is shorter than the current one and the current one was not recalculated within the last 5 minutes, then a message to confirm the new route will be displayed. This pop-up message will be displayed for 10 minutes and if the new route is not rejected, then the vehicle will follow the new route.

TRAFFIC ON ROUTE

While the vehicle is on the guidance route, the system will generate a traffic event list for that route when you select **Traffic on Route**.

The traffic event list will identify the cause of the event, the road that the event is affecting and the distance to the event. To view more detail about an event, or to view a map of the event area, select the relevant **Detail** or the **Map** button alongside the event list.

If a route is calculated but the vehicle is not on the highlighted route, a pop-up error message is displayed.

RDS-TMC ICONS

Any traffic event (broadcast on TMC) in your area, will be displayed as a warning icon on the map and a more detailed alert may be displayed. Voice guidance will also inform you of the hold-up when an event icon exists on the current route.

This data is stored in the system for up to 30 minutes.

The colour of the TMC icon changes in order to show the type and priority of a TMC event. The background colour of the icon returns to normal when there is no longer an event or hold-up, or if any re-route instructions are calculated.

The TMC Event icons appear on the navigation map display to indicate the location and nature of a TMC event.

TMC Event icons will appear on the map, even if the event does not occur on your route.
