SEAT BELTS

Do not allow any water, cleaning products, or fabric from cloths to enter the seat belt mechanism. Any substance which enters the mechanism may affect the performance of the seat belt in an impact.

Extend the seat belts fully, then use warm water and a non-detergent soap to clean. Allow the seat belts to dry naturally whilst fully extended and do not allow the belts to retract until fully dry.

Note: *Whilst cleaning the seat belt, take the opportunity to examine the webbing for damage and wear. Any wear or damage should be reported to, and rectified by, a Dealer/ Authorised Repairer.*

AIRBAG MODULE COVERS

Airbag covers should only be cleaned using a slightly dampened cloth, and a small amount of upholstery cleaner.

Any substance which enters the mechanism, can prevent correct deployment of an airbag during an impact.

PREPARATION FOR WINTER

Before the onset of winter, it is advisable to coat the convertible roof seals and respective body seals with a compound, such as Carbaflo KSP 105, to aid operation in freezing conditions. This action will need to be repeated at the start of each winter to maintain protection.

Care must be taken so that the compound does not come into contact with the convertible roof material. For further advise you should contact your Dealer/Authorised Repairer.
