

Seat belts

USING THE SEAT BELTS

E142530

- 1. Putting on a seat belt:** Draw the belt out smoothly, ensure that the belt height, the seat and the occupant's position on the seat, are correct.

 **Seat belts are designed to bear upon the bony structure of the body, and should be worn low across the front of the pelvis or the pelvis, chest and shoulders, as applicable; wearing the lap section of the belt across the abdominal area must be avoided.**

 **Seat belts should be adjusted as firmly as possible, consistent with comfort, to provide the protection for which they have been designed. A slack belt will greatly reduce the protection afforded to the wearer.**

 **Belts should not be worn with the straps twisted.**

 **Each belt assembly must only be used by one occupant. Never let children share a seat or seat belt.**

 **Never wear just the lap belt or just the shoulder belt of a lap/shoulder diagonal seat belt. Both of these actions are extremely dangerous and may increase your risk of injury.**

 **The occupants of the front seats should not travel with the seat back reclined excessively. Doing so will reduce the protection afforded by the seat belt.**

 **Never place anything between you and the seat belt. It can be dangerous and reduce the effectiveness of the seat belt in preventing injury.**

- 2. Fastening a seat belt:** With the seat belt correctly positioned, place the metal tongue into the buckle nearest to you. Press it in until a click is heard. Ensure that all slack has been taken up by the retractor and the belt fits tightly across the hips.
To release the seat belt, press the red button.
