

Parking aids

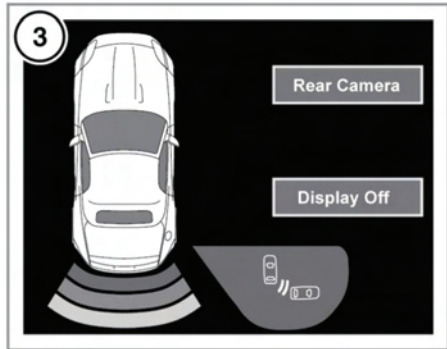

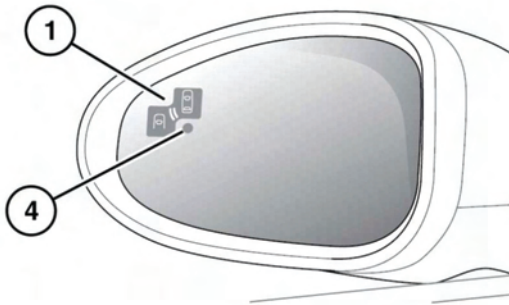

D. Parking aid sensor activation: a coloured area appears to indicate which rear sensor(s) is active.

Note: The camera display has priority over the parking aid display. To view the parking aid display instead, touch the display.

Instructional video - Rear camera.

REVERSE TRAFFIC DETECTION

E15 13 96

The Reverse Traffic Detection (RTD) system is a supplement to, not a replacement for, safe driving, good observation and use of the exterior and rear-view mirrors.

In addition to the functionality provided by the rear camera, the RTD system provides a warning to the driver of any moving vehicle, at

either side, that may pose an accident risk during a reversing manoeuvre.

An amber warning icon (1) will flash in the relevant exterior mirror and an audible warning will be emitted to indicate the presence of a moving vehicle. The rear camera screen (2) or the parking aid screen (3) will also show a warning on the relevant side(s) of the screen.
