

HEADLAMP WASHERS

Headlamp power wash operates automatically with the windscreen wash and will only operate if the headlamps are switched on and there is sufficient washer fluid in the reservoir.

Headlamp wash operates with every fourth operation of the screen washers, provided that 10 minutes have elapsed since the last operation of the headlamp washers.

Note: *The power wash sequence is reset when the headlamps or the ignition are turned off.*

Note: *Headlamp power wash is inhibited when the low washer fluid warning is on.*
