

12. The traction rating grades the performance of a tyre when stopping on a wet road surface. The higher the grade, the better the braking performance. The grades, from highest to lowest are; **AA, A, B and C**.
13. The maximum load which can be carried by the tyre.
14. Heat resistance grading. The tyres resistance to heat is grade A, B or C, with A indicating the greatest resistance to heat. This grading is provided for a correctly inflated tyre, which is being used within its speed and loading limits.
15. The maximum inflation pressure for the tyre. This pressure should not be used for normal driving. **179, TYRE CARE.**

## SPEED RATING

Rating	Speed km/h (mph)
Q	160 (99)
R	170 (106)
S	180 (112)
T	190 (118)
U	200 (124)
H	210 (130)
V	240 (149)
W	270 (168)
Y	300 (186)

## TYRE CARE

**Do not drive the vehicle if a tyre is damaged, excessively worn, or incorrectly inflated.**

**Avoid contaminating the tyres with vehicle fluids as they may cause damage to the tyre.**

**Avoid spinning the wheels. The forces released can damage the structure of the tyre and cause it to fail.**

**If wheel spin is unavoidable due to a loss of traction (in deep snow, for example), do not exceed 50 km/h (30 mph).**

**Do not exceed the maximum pressure stated on the sidewall of the tyre.**

**Avoid damaging the TPMS sensor when removing a tyre from the wheel and fitting a tyre to the wheel.**

All of the vehicle's tyres (including the spare) should be checked regularly for damage, wear and distortion. If you are in any doubt about the condition of a tyre, have it checked immediately by a tyre repair centre or a Dealer/Authorised Repairer.
