## TELEPHONE SAFETY

**Switch off your telephone in areas with a high explosion risk. This includes filling stations, fuel storage areas, or chemical factories, as well as places where the air contains fuel vapour, chemicals, or metal dust.**

**Always stow your mobile phone securely.**

**The functioning of cardiac pacemakers or hearing aids may be impaired when the phone is in use. Check with a doctor or manufacturer whether any such devices you or your passengers are using, are sufficiently protected against high-frequency energy.**

The Health Industry Manufacturers' Association recommends that a minimum separation of 15 cm (6 in) is maintained between a wireless phone antenna and a pacemaker, to avoid potential interference with the pacemaker. These recommendations are consistent with independent research by, and recommendations of, Wireless Technology Research.

## CALL VOLUME

The phone call's volume is operated by the Media system's volume control.

If the Media system is in use when a phone call is active, the Media system source is muted for the duration of the call.
