

The tyre pressures indicated on the vehicle's tyre information label are for use in all conditions on the original equipment tyres. If a reduced speed rating tyre is fitted, the recommended pressures are only suitable for use below 160 km/h (100 mph).

Winter tyres must be fitted to all 4 wheels.

For optimum traction, tyres should be run in for at least 160 kilometres on dry roads, before driving on snow or ice.

Use of dedicated winter tyres may require a change of wheel size, depending on the original choice of wheel. All 4 wheels must be changed.

If fitted with standard rubber valves, the Tyre Pressure Monitoring System (TPMS) warning lamp will flash for 75 seconds and then remain illuminated. The Message centre will also display **TYRE PRESSURE MONITORING SYSTEM FAULT**.

When the original wheels and tyres are refitted, the vehicle will need to travel a short distance to reset the TPMS and extinguish the warning lamp.

Approved winter tyres			
Wheel size	Tyre size	Brand	Pattern
17 inch wheels	225/55 R17 101V	Dunlop	WinterSport 4D
18 inch wheels	245/45 R18 100V	Pirelli	Sottozero 3
	245/45 R18 100V	Dunlop	WinterSport 3D
19 inch wheels	245/40 R19 98V	Pirelli	Sottozero 3
20 inch wheels	255/35 R20 97V	Dunlop	WinterSport 3D

Note: The vehicle's speed should be limited to a maximum of 210 km/h (130 mph) when recommended winter tyres are fitted. Failure to comply with this speed restriction will mean that the tyres are underinflated for the vehicle's speed. In addition the TPMS will fail to warn of underinflation at the correct pressure thresholds for these higher speeds. Contact your Retailer/Tyre distributor for the supply of an appropriate label, which should be placed within the driver's field of vision, as a reminder of this speed restriction.

If in doubt, or for further information, contact a Retailer/Authorised Repairer.

USING SNOW CHAINS

Only use traction devices in heavy snow conditions, on compacted snow.

Dynamic Stability Control (DSC) must be switched off when using traction devices.

Never exceed 50 km/h (30 mph) when traction devices are fitted.

Never fit traction devices to a temporary-use spare wheel.

Traction devices approved by the vehicle manufacturer, may be used to improve traction in heavy snow conditions, on compacted snow.

If it becomes necessary to fit traction devices, the following points must be observed:

- Only vehicle manufacturer approved traction devices should be used on the vehicle. Only vehicle manufacturer approved traction devices have been tested to make sure that they do not cause damage to the vehicle. Contact a Retailer/Authorised Repairer for information.
